Round open

PROBLEM

Enterprise ops runs on data. Generalist AI runs on guesses.

95% of AI pilots fail to deliver ROI. Teams forensically check every output.

Language models optimize for fluent answers, not defensible operational decisions.

Black-box ML

Predictions with no mechanism operators can audit in a board meeting or CMS review.

Correlation breaks

Patterns evaporate under regime change. Interventions fail when conditions shift.

Generic chat layers

Confident answers when facts are missing. Wrong default for B2B and enterprise ops.

The gap: no commercial system discovers governing relationships, returns auditable logic, and works across industries from one engine.

Specialist AI vs Generalist AI

Generalist AI

Predicts plausible language from the internet

Same chat wrapper for every industry

Sounds confident when it does not know

Outputs hard to audit under pressure

Optimizes for fluency, not truth

Diginetics Specialist AI

Answers only from validated client data

Scoped to one operation and industry

Powered by DDX in isolated environments

Every result traceable line by line

Built for B2B and enterprise ops

Novel data

Hidden drivers in data teams already own but were not querying.

Auditable results

Logic engineers, clinicians, and counsel can open and challenge.

Universal law discovery

Repeatable governing relationships, not fragile correlations.

DDX: Deterministic Discovery Engine

Point DDX at operational data. It discovers governing relationships, stress-tests them out of sample, and returns readable equations. Same engine, different table.

What DDX found (real runs, first pass)

COMMERCIAL REAL ESTATE

31 US metros, 12 years

32 metrics at 99%+ out-of-sample accuracy through COVID, rate hikes, normalization.

Months of housing supply $\approx$ f(30-year mortgage rate) – 99.9% across 31 metros

HEALTHCARE

101K encounters, 130 hospitals

Readmission rate within 0.02 percentage points of actual. Published models miss by 2–5pp.

Surfaced elevated glucose as dominant readmission driver – no clinical hypothesis given

BASEBALL

60 MLB players, out-of-sample

Parity with ZIPS / Steamer on HR rates. Exact counting-stat matches on multiple players.

Aaron Judge HR: 54 projected vs 53 actual | Suarez S0: 165 vs 165 exact

RETAIL

Daily POS, 98 metrics

481 of 486 candidate relationships passed strict out-of-sample acceptance.

Cross-category dependency: vape traffic driving cigarette sales – not flagged by analysts

OIL & GAS

Volve public production data

52 of 52 relationships passed. Rediscovered known petroleum physics from raw sensors.

GOR behavior recovered with no reservoir-specific configuration

TRANSPORTATION + WATER

Two corridor studies + 10-country pilot

70/70 pass ATI and PeMS. Water security: 76/76 pass, 98.84% avg accuracy.

2–5 month lead-time feedback loops for national early-warning signals

13 industries. One codebase. Zero domain rebuilds.

97%

Baseball / 60 players

0.02pp

Healthcare readmission gap

99%+

CRE metrics (32 at top tier)

481/486

Retail relationships pass

Industry	Headline result	Why it matters
Energy / O&G	52/52 Volve pass; known physics recovered	Same engine targets Oxy production ops
Legal	Matter-cost driver discovery on discovery data	Epiq pilot motion in progress
Public safety	Operational regime + response drivers	First Watch pilot motion in progress
Real estate	Capstone portfolio equations; Manifest deploying	Brokerage specialist actively deploying
Transportation	70/70 ATI + PeMS corridor validation	Reproducible across state and freeway scale
Water / security	76/76 country-level relationships	Explainable early-warning, not opaque scores

Validation plus enterprise anchor motion

Occidental Petroleum

ENERGY ANCHOR

Executive meeting in progress on production and oilfield intelligence. Same engine as Capstone and Volve; production table instead of housing table.

Epiq Global

LEGAL SUPER-HUB

Pilot motion on legal discovery and matter data. Matter cost, duration, and evidence triage drivers at scale.

First Watch Technologies

PUBLIC SAFETY

Pilot motion on 911, fire, and EMS operational streams. Causal drivers their dashboards do not surface.

Capstone Communities

COMMERCIAL RE

Live portfolio work: equations mapping cost structure and operating exposure across assets. Leadership-readable output, not another dashboard.

Manifest (real estate specialist)

Actively deploying with brokerages for buyer targeting, pricing defense, and agent coaching on the brokerage's own market data. Not GA yet. Elijah core powers all specialists.

The YOYO Plan

You go deep on one flagship anchor, then yo-yo back up through shared vendors that serve many operators in the same industry.

Why horizontal SaaS fails here

- Cold outbound to 500 logos burns cash
- Land-and-expand inside one logo caps TAM
- Black-box AI cannot transfer through hub partners

Why YOYO wins

- One proof event opens the industry graph
- Transfer decision templates, not client data
- Hub co-sell beats starting every sale from zero

Three waves (overlap by design)

Wave	Focus	Timing
1	Land anchor, wedge use case, internal expansion	0-12 mo
2	Map stack, land hub nodes, co-sell with anchor	6-24 mo
3	Peer anchors through shared hubs	12-36 mo

Target: 30%+ of new ARR from hub-up vs cold anchor outbound.

Occidental Petroleum: reference implementation

Wave 1: Down into Oxy

Wedge: production optimization, decline drivers, lift timing

Isolated AWS tenant on Oxy SCADA / production data

Success = deferred workovers, reallocated lift, fewer false alarms

Proof: Volve public validation + live asset pilot scope

Wave 2: Across the stack

Drilling and completions contractors (Permian fleet)

Field services, lift OEMs, SCADA / historian integrators

Score hubs: 3+ majors, same decision type, warm intro path

Target: 10+ hub node types, 3 prioritized hub partners

Wave 3: Up to peer anchors

Exxon, Chevron, BP, ConocoPhillips-class peers

Entry via shared hub: same decision class, different tenant

Transfers: equation structure + playbook

Does not transfer: raw Oxy production data

YOYO string (illustrative)

Peer anchors

Exxon, BP, Chevron

Shared hub

Completions contractor across Permian operators

Anchor

Occidental Petroleum

One sentence: Land on the operator everyone knows, map the vendors everyone shares, prove auditable decisions on anchor data, expand back up through those shared nodes.

\$151B addressable today across enterprise verticals

\$151B

TAM 2026

\$346B

TAM 2031

13

Validated verticals now

Vertical	TAM 2026	CAGR	Status
Healthcare & Life Sciences	\$44.0B	21%	Validated + pilot paths
Cybersecurity / Public Safety	\$24.3B	14%	First Watch pilot
Energy & Utilities	\$8.5B	16%	Oxy meeting + Volve proof
Commercial Real Estate	\$12.0B	14%	Capstone + Manifest deploying
Legal / Discovery	\$12B+	—	Epiq pilot motion
Financial Services	\$16.5B	12%	Pipeline

Enterprise-first, hub-led expansion

NOW Anchor pilots Isolated DDX deployment on flagship operator data. \$150K-\$1M per engagement	WAVE 2 Hub co-sell Decision templates through integrators serving many operators. \$250K-\$2M hub ARR + pull-through	SCALE Specialist platform Manifest + vertical modules on shared Elijah control plane. 130%+ target NDR on landed accounts
Unit economics targets 75%+ gross margin (software delivery) Low CAC via published results + hub intros LTV \$500K+ enterprise, expansion via YOYO Payback < 6 months per anchor client	Revenue mix goal (12 mo) 3 anchor pilots to production 10 hub partners in motion Second logo in energy graph without zero-proof sales Manifest from deploying to first production contracts	

Everyone else gives predictions. We give governing relationships.

Capability	Diginetics	Palantir	Tempus	Generic LLM
Auditable equations on client data	✓	✗	✗	✗
Novel driver discovery	✓	✗	~	✗
13 industries, one codebase	✓	✗	✗	~
Regime shift detection	✓	~	✗	✗
Deploy new vertical in days	✓	✗	✗	✗

Moat

18-36 month replication for statistical or language-first incumbents. Each deployment compounds hub connectors and decision templates.

Discovers what no one else finds

Judge power from plate discipline. Vape traffic driving cigarette sales. Glucose as readmission driver. GOR from raw Volve sensors. Portfolio equations at Capstone.

Built the engine. Running the anchors.

Michael Lazzarotti

CEO & Co-Founder

Built DDX and validated across 13 industries. Owns product, technical vision, enterprise anchor motion, and every published result.

Evan O'Connell

CFO, COO & Co-Founder

Business operations, financial strategy, go-to-market, and commercial partnerships across flagship verticals.

Mentorship + advisors

Ex-McKinsey and ex-MicroStrategy operators. Top cybersecurity IP counsel. CCBM / Dr. Kumar manuscript-level validation partnership. Peachscore accelerator (active).

Pre-seed open

Pre-Seed	4	YOYO
Round open	Anchor motions active	Hub-led GTM
Use of funds Convert Oxy, Epiq, First Watch, Capstone pilots to production Hub mapping + co-sell motion (YOYO Wave 2) Manifest deployment + Elijah production infrastructure Patent expansion + enterprise security packaging	12-month milestones 3 anchor pilots to production contracts 10 hub partners with signed co-sell or integration 30%+ new ARR from hub-up expansion Manifest from deploying to production revenue	

One engine. Four anchor ecosystems.

Vertical	Anchor	Hub examples	Peer expansion
Energy	Occidental	Field services, SCADA SI, cloud	Exxon, Chevron, BP
Legal	Epiq Global	Relativity partners, forensics	Corporate legal, Am Law
Public safety	First Watch	CAD integrators, MSSPs	Cities, states, federal
Real estate	Capstone / Manifest	MLS, CRM, lenders	Brokerages, REITs

Objective: default auditable decision intelligence layer for B2B and enterprise ops. Specialist AI on DDX. YOYO for distribution.
