

INVESTOR PITCH DECK | MAY 2026

DIGINETICS

Specialist AI for B2B and enterprise operations.

One discovery engine. Thirteen industries validated. Auditable equations on client data. Hub-led distribution that compounds with every anchor.

13 INDUSTRIES VALIDATED	20-40x VS MICROSOFT PRESIDIO	52/52 VOLVE PASS RATE	4 ANCHOR MOTIONS LIVE	Pre-Seed ROUND OPEN
---	--	---	---	---

Enterprise ops runs on data. Generalist AI runs on guesses.

95% of enterprise AI pilots fail. Generalist LLMs optimize for fluent answers, not defensible decisions.

Black-box ML

Predictions with no mechanism. Cannot be audited in board meetings, CMS reviews, or regulator filings.

Correlation breaks

Patterns evaporate under regime change.
Models fail exactly when ops needs them most.

Generalist chat

Confident when facts are missing. Hallucinated citations. Wrong default for enterprise ops.

No commercial system **discovers** governing relationships, **returns** auditable logic, and **works across industries** from one engine. That is the category we built.

Specialist AI vs Generalist AI

Generalists wrap a chat layer around the internet. Specialists run on validated client data and return logic engineers, counsel, and operators can challenge line by line.

Generalist AI

OpenAI, Anthropic, Gemini, generic copilots

- Predicts language from public internet
- Same chat wrapper for every industry
- Confident when it does not know
- Brittle when conditions change

Diginetics Specialist AI

DDX engine, one operation per deployment

- Answers only from validated client data
- Scoped to one operation, one industry
- Isolated tenant, every result traceable
- Detects regime shift before incumbents

Novel data

Hidden drivers in data clients already own. Cross-category dependencies analysts miss.

Auditable results

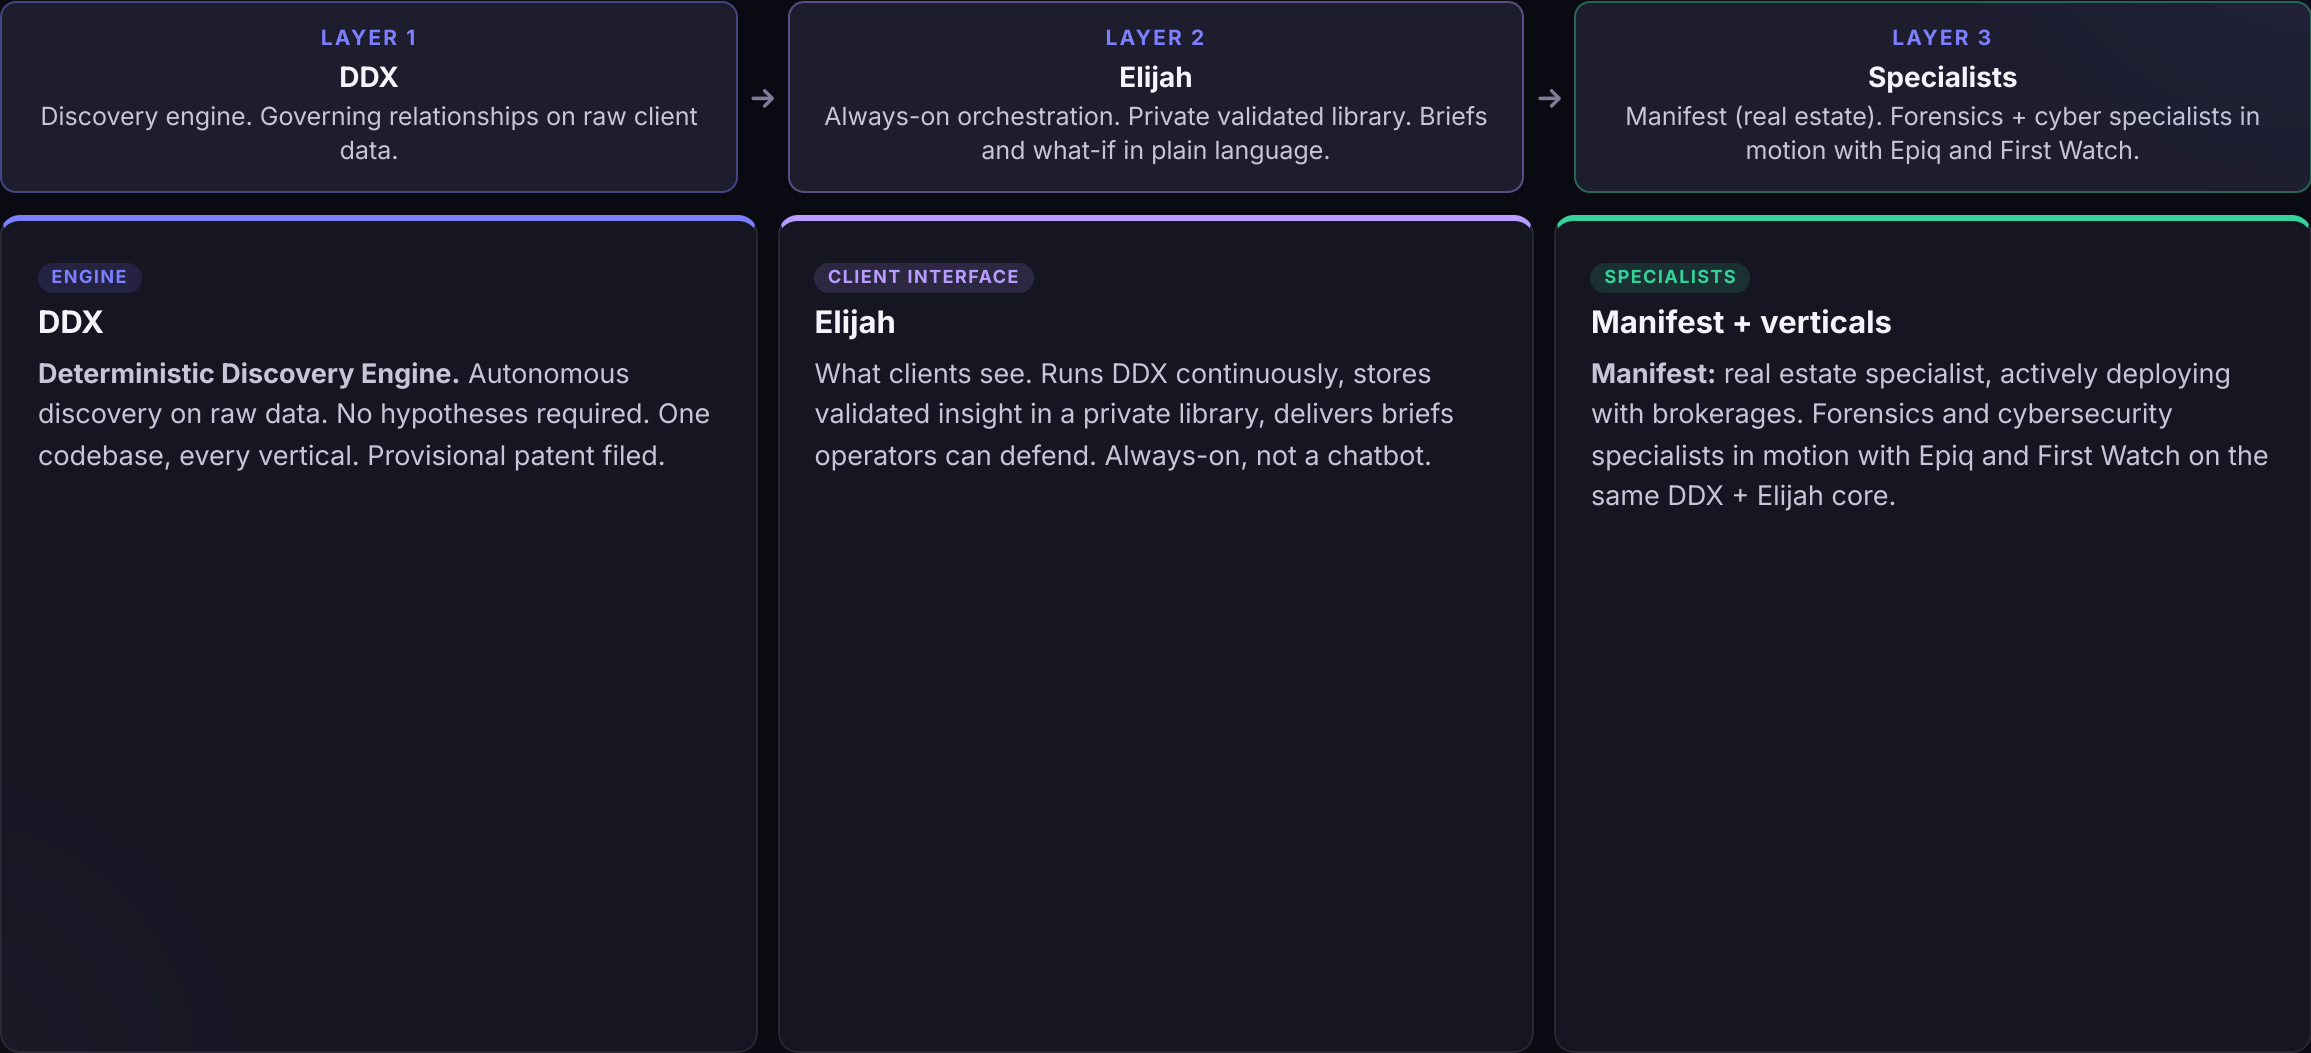

Engineers, counsel, clinicians can challenge every line. Defensible in board rooms and regulator reviews.

Universal law discovery

Governing relationships, not fragile correlations. Same engine across 13 verticals.

DDX discovers. Elijah orchestrates. Specialists ship.

One engine powers everything. New vertical equals a new specialist, not a rebuild.

What DDX found. Real runs, first pass, out-of-sample.

PRESIDIO BENCHMARK Beat Microsoft Presidio on PII and compromised-data forensics

Head to head, same corpus, audited. Microsoft's data forensics platform for extracting compromised info from enterprise data. Same engine in motion with Epiq (forensics) and First Watch (cybersecurity).

20-40x
FASTER VS PRESIDIO

More accurate
MORE PII FOUND

< 1/2 mem
MEMORY FOOTPRINT

NASA VALIDATION

Kepler's third law from solar-system data

Raw planet observations, no physics priors. DDX recovered $T^2 \propto a^3$ from NASA data alone.

EINSTEIN DATASET

Laws of relativity from gravitational data

Governing relationships recovered from Einstein gravitational observations. Auditable equations, not black-box extrapolation.

COMMERCIAL REAL ESTATE

31 metros, $R^2 = 0.999$

One equation explained housing supply across the country, through COVID and rate hikes.

`months_of_supply ≈ 1.78 + f(30yr_mortgage_rate)`

HEALTHCARE

101K encounters, 130 hospitals

Readmission within 0.02pp of actual. Published models miss by 2-5pp.

`Surfaced elevated glucose as dominant driver, no hypothesis given`

RETAIL (NRS)

481 of 486 pass

Daily POS, 98 metrics, strict out-of-sample acceptance.

`Vape traffic drives cigarette sales: cross-category dependency analysts missed`

OIL & GAS (VOLVE)

52 of 52 pass

Rediscovered known petroleum physics from raw sensors. No reservoir config.

`GOR behavior recovered from raw Volve sensors`

BASEBALL

60 MLB, exact matches

Parity with ZiPS and Steamer. Exact counting-stat matches on multiple hitters.

`Judge HR: 54 vs 53 | Suarez S0: 165 vs 165 exact`

TRANSPORTATION + WATER

70/70 corridor, 76/76 country

ATI + PeMS corridor pass. Water 10-country, 98.84% accuracy.

`2-5 month lead-time loops for early-warning`

Thirteen industries. One codebase. Zero domain rebuilds.

20-40x

FASTER VS PRESIDIO (FORENSICS)

99.9%

CRE HOUSING LAW, 31 METROS

0.02pp

HEALTHCARE READMISSION GAP

481/486

RETAIL RELATIONSHIPS PASS

INDUSTRY	HEADLINE RESULT	WHY IT MATTERS	STATUS
Data Forensics / Cybersecurity	Beat Microsoft Presidio on PII and compromised-data forensics: 20-40x faster, more records found, <half memory	Same engine in motion with Epiq + First Watch	✓
Universal law discovery	Kepler's $T^2 \propto a^3$ from NASA solar-system data; laws of relativity from Einstein gravitational data	Proof the engine discovers governing relationships, not correlations	✓
Energy / Oil & Gas	52/52 Volve pass, known physics recovered	Same engine targets Occidental production ops	✓
Healthcare	0.02pp readmission gap, glucose driver discovered	Hospital systems, CMS-defensible output	✓
Commercial Real Estate	32 metrics at 99%+ across 31 US metros	Capstone live + Manifest actively deploying	✓
Retail	481/486 pass, cross-category drivers (NRS)	POS-level predictive logic at chain scale	✓
Transportation + Water	70/70 ATI/PeMS, 76/76 country water	Reproducible at corridor and national scale	✓
Sports (baseline proof)	97% MLB, exact counting-stat matches	Parity with ZiPS and Steamer, first commercial proof	✓

Validation plus four live enterprise anchor motions

Land deep on the operator everyone knows, then yo-yo back up through the vendors that serve every peer.

ENERGY ANCHOR

Occidental Petroleum

Executive meeting in progress.
Production and oilfield intelligence.
Same engine as Capstone and Volve.

DATA FORENSICS

Epiq Global

Pilot motion. Data forensics and PII extraction from compromised data.
Same engine that beat Microsoft Presidio 20-40x on the same forensics corpus.

CYBERSECURITY

First Watch Technologies

Pilot motion. Cybersecurity: compromised-data analysis and threat triage. Defensible findings, not black-box scores.

COMMERCIAL RE

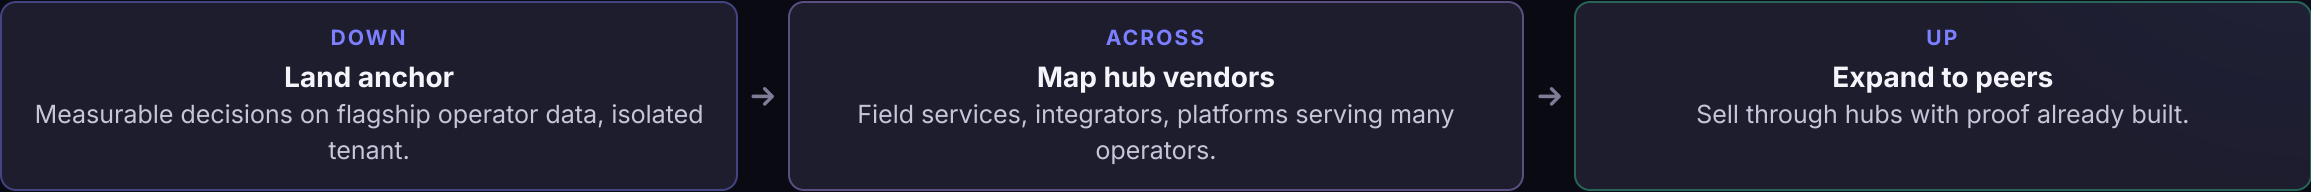

Capstone Communities

Live portfolio work. Equations mapping cost structure and operating exposure. Leadership-readable, not a dashboard.

SPECIALIST PRODUCT **Manifest (real estate)** | **actively deploying** with brokerages for buyer targeting, pricing defense, agent coaching. Not GA yet.

The YOYO Plan: Down, Across, Up

Land deep on one anchor, map the hub vendors that serve everyone in the industry, yo-yo back up. Every anchor compounds distribution for the next.

Why horizontal SaaS fails

- Cold outbound to 500 logos burns cash
- Land-and-expand caps TAM at one operator
- Black-box AI cannot transfer through hubs

Why YOYO wins

- One proof event opens the industry graph
- We transfer decision templates, not client data
- Hub co-sell beats starting every sale from zero

Three waves (overlap by design)

WAVE	FOCUS	TIMING
1	Land anchor, wedge use case	0-12 mo
2	Map stack, land hub nodes, co-sell	6-24 mo
3	Peer anchors through shared hubs	12-36 mo

Target: 30%+ of new ARR from hub-up by month 18.

Occidental Petroleum: anchor to peer ecosystem

WAVE 1 — DOWN

Into Oxy

- **Wedge:** production optimization, lift timing
- **Tenant:** isolated AWS on Oxy SCADA + production
- **Success:** deferred workovers, fewer false alarms
- **Proof:** Volve 52/52 + live pilot scope

WAVE 2 — ACROSS

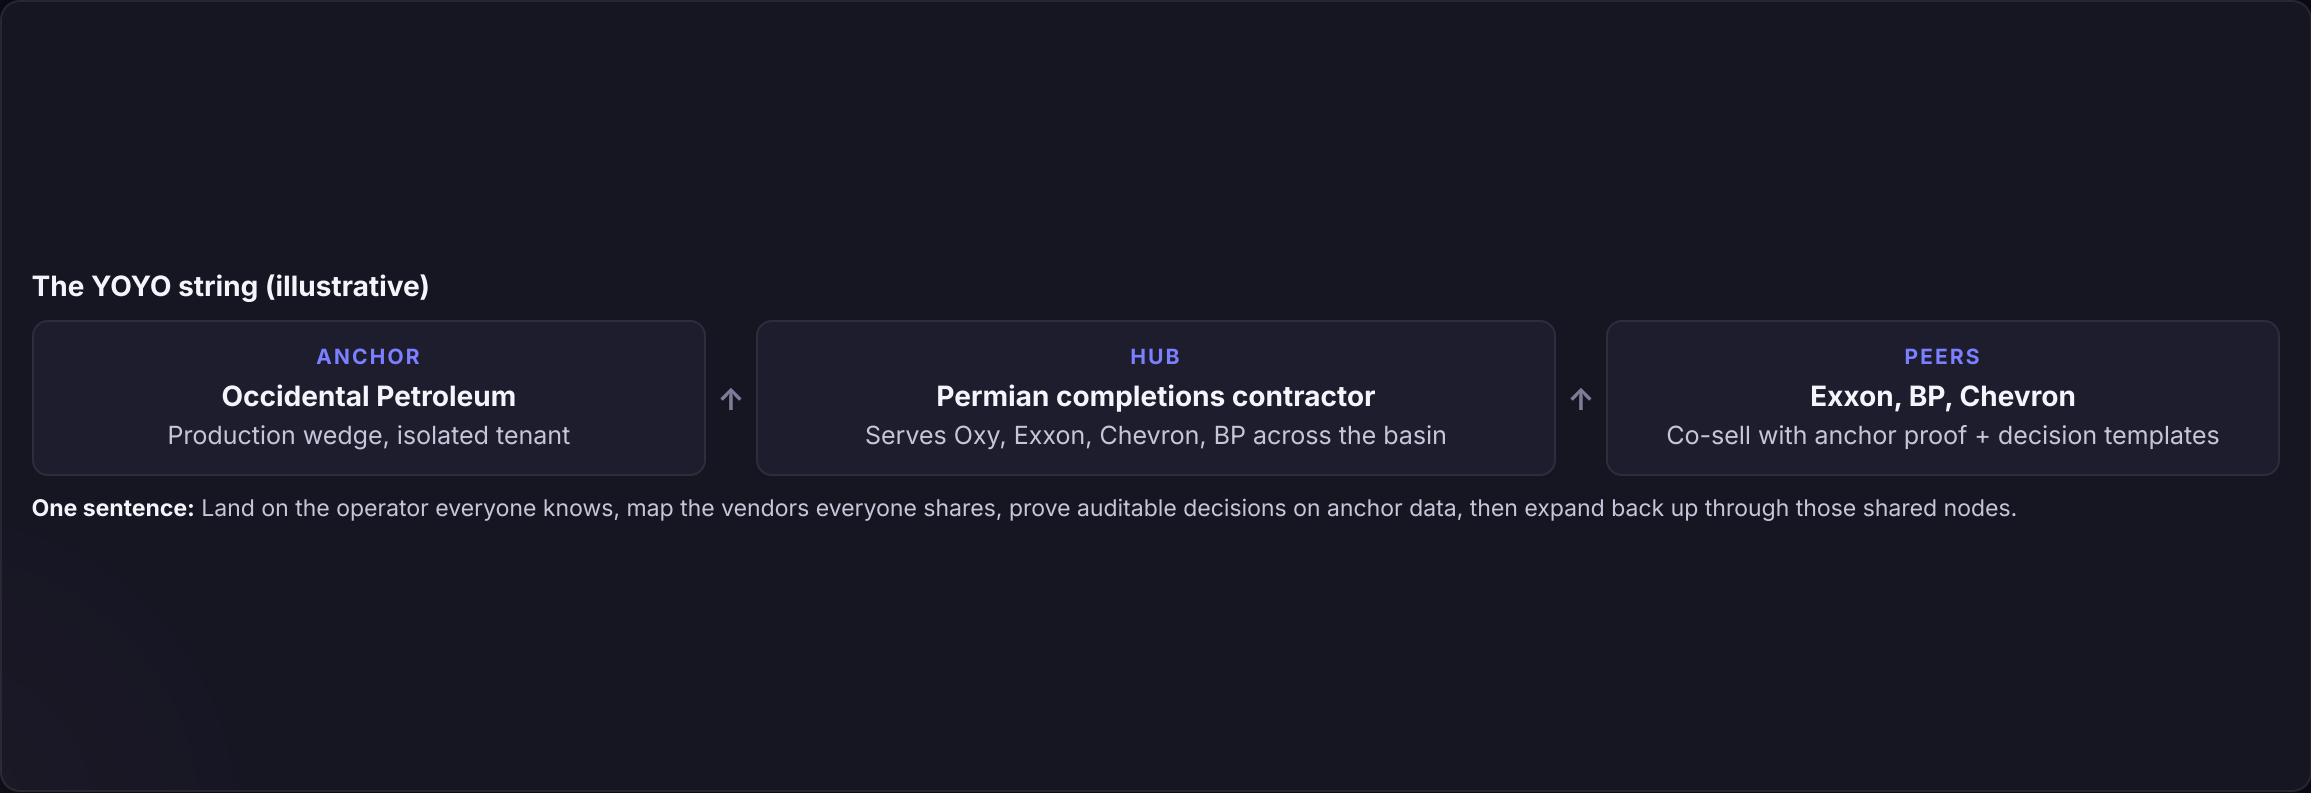

The stack

- Permian completions and drilling contractors
- Field services, lift OEMs, SCADA integrators
- **Score:** 3+ majors served, same decision class
- **Target:** 10+ node types, 3 hub partners

WAVE 3 — UP

Peer anchors

- Exxon, Chevron, BP, Conoco-class peers
- **Entry:** via shared hub, different tenant
- **Transfers:** equation structure + playbook
- **Never transfers:** raw Oxy data

\$151B addressable today, \$346B by 2031

Decision intelligence is consolidating into one category. Every vertical needs an auditable, specialist layer. We are the only platform validated across thirteen of them from one codebase.

\$151B

TAM 2026 ACROSS VERTICALS

\$346B

TAM 2031 PROJECTION

Enterprise-first, hub-led expansion

NOW

Anchor pilots

Isolated DDX deployment on flagship operator data.
Real decisions, scoped wedge, measurable outcomes.

\$150K - \$1M

per engagement, 6-12 mo

WAVE 2

Hub co-sell

Decision templates through integrators serving many operators in the same industry.

\$250K - \$2M

hub ARR + pull-through

SCALE

Specialist platform

Manifest, plus forensics and cyber verticals, on shared Elijah control plane. Net dollar retention engine.

130%+ NDR

target on landed accounts

Unit economics targets

- 75%+ gross margin on software delivery
- Low CAC via published results + hub intros
- LTV \$500K+ enterprise, YOYO peer expansion
- Payback < 6 months per anchor

12-month revenue mix

- 3 anchor pilots to production contracts
- 10 hub partners in active co-sell
- Second logo in energy graph (no zero-proof outbound)
- Manifest moves to first GA contracts

Everyone gives predictions. We give governing relationships.

CAPABILITY	DIGINETICS	PALANTIR	TEMPUS AI	C3.AI	MS PRESIDIO	GENERALIST LLM
Auditable equations on client data	✓	✗	✗	~	✗	✗
Novel driver discovery (no hypothesis)	✓	✗	~	✗	✗	✗
Beat Presidio on forensics corpus, 20-40x	✓	✗	✗	✗	✗	✗
13 industries from one codebase	✓	✗	✗	✗	✗	~
Regime shift detection	✓	~	✗	~	✗	✗
Hub-led distribution moat (YOYO)	✓	✗	✗	✗	✗	✗

Moat

18 to 36 month replication for statistical or language-first incumbents. Each deployment compounds hub connectors and decision templates. Provisional patent filed on DDX discovery framework.

What we find that no one else does

20-40x over Presidio on PII and compromised-data forensics. Kepler's law and laws of relativity from NASA and Einstein datasets. Glucose as the dominant readmission driver. Vape traffic driving cigarette sales. GOR from raw Volve sensors.

Built the engine. Running the anchors. Closing the deals.

Three co-founders, complementary lanes. Engine and product. Operations and capital. Sales and accounts.

Michael Lazzarotti

CEO & Co-Founder

Built DDX from scratch. Validated across thirteen industries, every result out-of-sample. Owns product, technical vision, and anchor motion.

michael.lazzarotti@diginetics.co

Evan O'Connell

CFO, COO & Co-Founder

Business operations, financial strategy, go-to-market. Owns commercial partnerships across flagship verticals.

evan.oconnell@diginetics.co

Ben Miller

Chief of Sales & Co-Founder

Owns sales motion, anchor account close, hub partner co-sell. Translates DDX, Elijah, and Manifest proof into signed contracts across all four verticals.

ben.miller@diginetics.co

Mentorship and advisors

Ex-McKinsey + ex-MicroStrategy
Enterprise GTM operators

Top cybersecurity IP counsel
Patent + enterprise security

CCBM / Dr. Kumar (UA)
Manuscript validation partnership

Peachscore Accelerator
Active cohort, capital network

Pre-seed open

Capital converts four anchor motions into production revenue and lights up Wave 2 hub mapping behind each one. Distribution compounds.

Pre-Seed

ROUND OPEN NOW

4

ANCHOR MOTIONS ACTIVE

YOYO

HUB-LED GTM ENGINE

Use of funds

- Convert Oxy, Epiq, First Watch, Capstone to production
- Hub mapping + co-sell motion (Wave 2 across all four)
- Manifest + forensics/cyber specialist scale-up
- Patent expansion + enterprise security packaging

12-month milestones

- 3 anchor pilots to production contracts
- 10 hub partners signed co-sell or integration
- 30%+ of new ARR from hub-up expansion
- Manifest + forensics specialist first GA contracts

Now: four anchor ecosystems. Next: a new form of AI.

Today we ship Specialist AI on DDX across four anchor industries. The long-term thesis is bigger.

Now: default decision layer for B2B ops

VERTICAL	ANCHOR	SPECIALIST	HUB EXAMPLES	PEER EXPANSION
Energy	Occidental Petroleum	Elijah (energy)	Field services, SCADA SI	Exxon, Chevron, BP, Conoco
Data Forensics	Epiq Global	Elijah (forensics)	Relativity, eDiscovery	Corporate legal, Am Law 100
Cybersecurity	First Watch Technologies	Elijah (cyber)	MSSPs, SOC integrators	Enterprise security teams
Real Estate	Capstone + brokerages	Manifest	MLS, CRM, lenders	Brokerages, REITs

Next: a new form of AI that reasons through DDX

Every anchor we land adds validated relationships, feedback effects, and governing equations to our private corpus. We use that corpus to train and create a fundamentally new form of AI. It does not predict the next token. It does not chase statistical correlations. It **reasons through DDX** and **calculates the physical reality of the world**, the way the actual systems we operate in actually behave.

LLMS TODAY

Predict the next token. Statistics over internet text. No mechanism, no truth.

DDX TODAY

Auditable governing equations on client data. One operation at a time.

DDX-NATIVE AI (NEXT)

Reasons through governing equations. Calculates physical reality, not tokens.

THANK YOU

Land on the operator everyone knows. Map the vendors everyone shares.

Prove auditable decisions. Expand back up through shared nodes. That is Diginetics.
