PROBLEM

Enterprise ops runs on data. Generalist AI runs on guesses.

95% of AI pilots fail to deliver ROI (MIT/Forbes 2025). Teams forensically check every output. The problem is architecture: language models optimize for fluent answers, not defensible decisions.

Black-Box ML

Predictions with no mechanism operators can audit or challenge in a meeting.

Correlation != Causation

Patterns break under regime change.
Interventions fail when conditions shift.

Generic Chat Layers

Confident answers when facts are missing.
Wrong default for B2B and enterprise ops.

High-stakes operators need Specialist AI: scoped to their operation, grounded in their data, auditable line by line.

CATEGORY

Specialist AI vs Generalist AI

Generalist AI

- Predicts plausible language
- Trained on the whole internet
- Sounds confident when it does not know
- Same chat layer for every industry
- Outputs hard to audit under pressure

Diginetics Specialist AI

- Answers only from validated client data
- Scoped to one operation and industry
- Refuses to ship unverified logic
- Powered by DDX in isolated environments
- Every result traceable and auditable

Production specialist AI for B2B and enterprise ops. Not ChatGPT with a logo.

PLATFORM

Powered by DDX

Deterministic Discovery Engine

DDX discovers governing relationships in messy operational data and converts them into readable, testable logic. Same engine, different table: energy production, legal matters, healthcare encounters, brokerage markets, emergency operations.

1**Discover**

Find novel drivers and patterns teams were not querying for.

2**Validate**

Stress-test relationships on held-out data before anything ships.

3**Deploy**

Auditable equations in isolated client environments on AWS.

What DDX unlocks for enterprise buyers**Novel Data**

Hidden structure in data they already own

Auditable Results

Logic teams can open, challenge, and defend

Universal Law Discovery

Repeatable relationships, not fragile correlations

VALIDATION

13 industries validated from one codebase

Same engine. Zero code changes between domains. Out-of-sample results on real public and client data.

Baseball**97%**

60 MLB players
Outperforms public
projection systems

Healthcare**0.18%**

101K encounters
130 hospitals
Readmission drivers

CRE**93.5%**

31 US metros
12 years of data
Through COVID + rate hikes

Energy**70/70**

Volve production
Public petroleum data
Physics equations pass

Also validated: retail, legal, transportation, water, defense, public safety, insurance, and additional verticals. Provisional patent filed on the discovery and validation framework.

TRACTION

Enterprise anchor motion in progress

Most pre-seed companies have a deck. We have validated results and flagship operator conversations.

Occidental Petroleum**ENERGY**

Executive meeting in progress on production and oilfield intelligence. Same engine as Capstone; production table instead of housing table.

Epiq Global**LEGAL**

Pilot motion on legal discovery and matter data. Equation discovery on evidence and matter outcomes at scale.

First Watch Technologies**PUBLIC SAFETY**

Pilot motion on 911, fire, and EMS operational intelligence. Causal drivers their dashboards do not surface.

Capstone Communities**REAL ESTATE**

Live commercial portfolio work. Equations leadership could read and act on across their asset book.

Manifest, our real estate specialist, is live with brokerages today.

GO-TO-MARKET

The YOYO Plan

You go deep on one flagship anchor's vertical stack, then yo-yo back up through shared companies that serve many anchors in the same industry.

DOWN**Land Anchor**

Flagship operator proves measurable decisions on their data.

>

ACROSS**Map Hubs**

Identify vendors and integrators serving many operators.

>

UP**Expand Peers**

Sell through shared hubs with proof already built.

Why YOYO works with Specialist AI

We transfer decision templates and auditable logic, not raw client data. One proof event on anchor data opens the rest of the industry graph legally and commercially. Black-box vendors cannot give hubs and regulators a portable mechanism. We can.

YOYO EXAMPLE

Occidental Petroleum

Reference implementation

Wave 1: Land on Oxy (Down)

- * Wedge: production optimization, decline drivers, lift and intervention timing
- * Deploy DDX in isolated environment on Oxy production and SCADA data
- * Success = measurable decisions deferred workovers, reallocated lift, reduced false alarms
- * Proof anchor: public Volve validation + live asset pilot scope

Wave 2: Map Oxy's stack (Across)

- * Drilling and completions contractors
- * Field services and artificial lift OEMs
- * SCADA / historian and digital oilfield integrators
- * Score hubs: serves 3+ majors, same decision type, warm intro path

Wave 3: Yo-yo up to peer anchors (Up)

- * ExxonMobil, Chevron, BP, ConocoPhillips-class peers
- * Entry through shared Permian hub: same decision class, different tenant
- * Message: same physics as Volve and Oxy pilot, same engine
- * Transfers: equation structure and playbook. Not: raw Oxy data

COMPETITION

Everyone else gives predictions. We give governing relationships.

Capability	Diginetics	Palantir	Tempus AI	Generic LLM
Auditable equations on client data	Y	X	X	X
Novel driver discovery	Y	X	X	~
Works across 13 industries	Y	X	X	~
Isolated enterprise deployment	Y	~	Y	Y
Explains regime shifts	Y	X	X	X
Deploy new vertical in days	Y	X	X	X

Moat: 18-36 month replication timeline for incumbents built on statistical or language-first architectures. Each anchor deployment compounds hub connectors and decision templates.

MARKET

\$151B+ addressable across enterprise verticals

Vertical	TAM 2026	Status
Healthcare & Life Sciences	\$44B	Validated + pilot paths
Cybersecurity / Public Safety	\$24B	First Watch pilot
Energy & Production Ops	\$8.5B	Oxy meeting + Volve proof
Legal / Discovery Ops	\$12B+	Epiq pilot motion
Commercial Real Estate	\$12B	Capstone + Manifest live
Financial Services	\$16.5B	Pipeline

\$151B

Combined TAM

13

Industries

1

Engine

BUSINESS MODEL

Enterprise-first, then hub-led expansion

NOW

Anchor Pilots

\$150K-\$1M

Isolated DDX deployment on flagship operator data.

WAVE 2

Hub Co-Sell

\$250K-\$2M

Templates through integrators serving many operators.

SCALE

Platform ARR

130%+ NDR

Multi-vertical specialists on shared control plane.

Target economics

Metric	Target
Gross margin	75%+ software delivery
Expansion	Hub-up ARR + anchor NDR 130%+
Sales cycle	Pilot to production via YOYO waves
Deployment	Days to weeks, not 6-18 months

TEAM

Built by operators who own the engine and the revenue path

Michael Lazzarotti**CEO & Co-Founder**

Built DDX and validated it across 13 industries. Owns product, technical vision, and enterprise anchor motion.

Evan O'Connell**CFO, COO & Co-Founder**

Business operations, financial strategy, and commercial partnerships across flagship verticals.

Mentorship bench

Ex-McKinsey and ex-MicroStrategy operators. Top cybersecurity IP counsel. Academic validation partners including CCBM / Dr. Kumar manuscript-level work.

FOCUS

4 Anchors

Oxy, Epiq, First Watch, Capstone

GOAL

Hub Motion

YOYO Wave 2 co-sell partners

Use of funds

- * Convert anchor pilots (Oxy, Epiq, First Watch, Capstone) to production contracts
- * Hub mapping and co-sell motion for YOYO Wave 2
- * Manifest commercialization and Elijah production infrastructure
- * Patent expansion and enterprise security/compliance packaging

12-month milestones

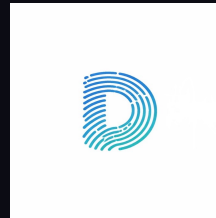

- * 3 anchor pilots to production
- * 10 hub partners in motion with signed co-sell or integration path
- * 30%+ of new ARR from hub-up expansion vs cold anchor outbound

VISION

One engine. Four anchor ecosystems.

Vertical	Anchor	Hub examples	Peer expansion
Energy	Occidental	Field services, SCADA SI	Exxon, Chevron, BP
Legal	Epiq Global	Relativity partners, forensics	Corporate legal, Am Law
Public Safety	First Watch	CAD integrators, MSSPs	Cities, states, federal
Real Estate	Capstone / Manifest	MLS, CRM, lenders	Brokerages, REITs

Objective: become the default auditable decision intelligence layer for B2B and enterprise ops across energy, legal, public safety, and healthcare.
