

INVESTOR PITCH DECK | MAY 2026

DIGINETICS

Specialist AI for B2B and enterprise operations.

One discovery engine. Thirteen industries validated. Auditable equations on client data. Hub-led distribution that compounds with every anchor.

13 INDUSTRIES VALIDATED	20-40x VS MICROSOFT PRESIDIO	52/52 VOLVE PASS RATE	4 ANCHOR MOTIONS LIVE	Pre-Seed ROUND OPEN
---	--	---	---	---

Enterprise ops runs on data. Generalist AI runs on guesses.

95% of enterprise AI pilots fail to deliver ROI. Generalist LLMs optimize for fluent answers, not defensible operational decisions. Teams forensically check every output because models cannot explain themselves.

Black-box ML

XGBoost, deep nets, ensemble scores produce predictions with no mechanism. Cannot be audited in a board meeting, CMS review, or regulator filing.

Correlation breaks

Statistical patterns evaporate under regime change. Models trained pre-COVID, pre-rate-hike, or pre-shock fail exactly when ops needs them most.

Generalist chat layers

Confident answers when facts are missing. Hallucinated citations. Wrong default for legal forensics, oilfield production, or hospital readmissions.

The gap: no commercial system **discovers** governing relationships, **returns** auditable logic, and **works across industries** from one engine. That is the category we built.

Specialist AI vs Generalist AI

Generalists wrap a chat layer around the internet. Specialists run on validated client data inside an isolated tenant and return logic engineers, counsel, and operators can challenge line by line.

Generalist AI

OpenAI, Anthropic, Gemini, generic copilots

- Predicts plausible language from public internet
- Same chat wrapper for every industry
- Sounds confident when it does not know
- Outputs hard to audit under pressure
- Brittle when conditions change

Diginetics Specialist AI

DDX engine, one operation per deployment

- Answers only from validated client data
- Scoped to one operation, one industry
- Powered by DDX in isolated tenant environments
- Every result traceable to source and equation
- Detects regime shift before incumbents do

Novel data

Hidden drivers in data clients already own but were not querying. Cross-category dependencies analysts miss.

Auditable results

Logic engineers, counsel, and clinicians can open and challenge. Defensible in board rooms and regulator reviews.

Universal law discovery

Repeatable governing relationships, not fragile correlations. Same engine across 13 verticals, zero rebuilds.

DDX discovers. Elijah orchestrates. Specialists ship.

One discovery engine powers everything. Specialists are industry-shaped products on top of the same control plane. New vertical equals a new specialist, not a new rebuild.

What DDX actually found (real runs, first pass)

Every result below is out-of-sample, surfaced from data the client already owned, and explainable to the team responsible for the decision. No tuning. No hypotheses given.

EINSTEIN FLAGSHIP

Beating Microsoft Presidio on data forensics + PII extraction

Head to head on the same corpus, audited. More PII and compromised records found, under half the memory, deterministic output instead of black-box guesses. Enterprise security scale with defensible audit trail.

20-40x
FASTER VS PRESIDIO

More found
PII + COMPROMISED RECORDS

< 1/2 mem
MEMORY FOOTPRINT

COMMERCIAL REAL ESTATE

31 metros, 12 years, $R^2 = 0.999$

One equation explained housing supply across the country. Held through COVID, rate hikes, normalization.

months_of_supply $\approx 1.78 + f(30yr_mortgage_rate)$

HEALTHCARE

101K encounters, 130 hospitals

Readmission rate within 0.02pp of actual. Published models miss by 2-5pp.

Surfaced elevated glucose as dominant readmission driver, no clinical hypothesis given

RETAIL (NRS)

481 of 486 relationships pass

Daily POS, 98 metrics. Strict out-of-sample acceptance criteria.

Vape traffic drives cigarette sales: cross-category dependency analysts missed

OIL & GAS (VOLVE)

52 of 52 relationships pass

Rediscovered known petroleum physics from raw sensor streams. No reservoir-specific config.

GOR behavior recovered + Kepler's third law $T^2 \propto a^3$ from NASA data

BASEBALL

60 MLB players, exact matches

Parity with ZiPS and Steamer on HR rates. Exact counting-stat matches multiple hitters.

Judge HR: 54 proj vs 53 actual | Suarez S0: 165 vs 165 exact

TRANSPORTATION + WATER

70/70 corridor, 76/76 country

ATI + PeMS corridor pass. Water security 10-country pilot, 98.84% avg accuracy.

2-5 month lead-time feedback loops for national early-warning

Thirteen industries. One codebase. Zero domain rebuilds.

20-40x

FASTER VS PRESIDIO (EINSTEIN)

99.9%

CRE HOUSING LAW, 31 METROS

0.02pp

HEALTHCARE READMISSION GAP

481/486

RETAIL RELATIONSHIPS PASS

INDUSTRY	HEADLINE RESULT	WHY IT MATTERS	STATUS
Cybersecurity / Data Forensics	20-40x faster vs Microsoft Presidio, more PII found, <half memory	Einstein specialist. Epiq + First Watch motions	✓
Energy / Oil & Gas	52/52 Volve pass, known physics recovered	Same engine targets Occidental production ops	✓
Healthcare	0.02pp readmission gap, glucose driver discovered	Hospital systems, CMS-defensible output	✓
Commercial Real Estate	32 metrics at 99%+ across 31 US metros	Capstone live + Manifest actively deploying	✓
Retail	481/486 pass, cross-category drivers (NRS)	POS-level predictive logic at chain scale	✓
Transportation + Water	70/70 ATI/PeMS, 76/76 country water	Reproducible at corridor and national scale	✓
Sports (baseline proof)	97% MLB, exact counting-stat matches	Parity with ZIPS and Steamer, first commercial proof	✓

Validation plus four live enterprise anchor motions

Each anchor is the operator everyone in its industry knows. Land deep, prove auditable decisions, then yo-yo back up through the vendors that serve every peer.

ENERGY ANCHOR

Occidental Petroleum

Executive meeting in progress on production and oilfield intelligence. Same engine as Capstone and Volve, production table instead of housing table.

LEGAL FORENSICS

Epiq Global

Pilot motion on data forensics + PII extraction from compromised data. Einstein specialist, beating Presidio on the same eDiscovery workflows Epiq runs today.

CYBERSECURITY

First Watch Technologies

Pilot motion on cybersecurity. Einstein on compromised-data analysis and threat-data triage. Defensible findings instead of black-box scores.

COMMERCIAL RE

Capstone Communities

Live portfolio work. Equations mapping cost structure and operating exposure across assets. Leadership-readable, not another dashboard.

SPECIALIST
PRODUCT

Manifest (real estate) | actively deploying with brokerages for buyer targeting, pricing defense, agent coaching on the brokerage's own market data. Not GA yet. Elijah core powers every specialist.

The YOYO Plan: Down, Across, Up

Go deep on one flagship anchor, map the hub vendors that serve everyone in that industry, then yo-yo back up through shared vendors. Every anchor compounds distribution for the next one.

Why horizontal SaaS fails here

- Cold outbound to 500 logos burns cash before anyone trusts the output
- Land-and-expand inside one logo caps TAM at one operator
- Black-box AI cannot transfer through hub partners

Why YOYO wins

- One proof event opens the entire industry graph
- We transfer decision templates, not client data
- Hub co-sell beats starting every sale from zero

Three waves (overlap by design)

WAVE	FOCUS	TIMING
1	Land anchor, wedge use case, internal expansion	0-12 mo
2	Map stack, land hub nodes, co-sell with anchor	6-24 mo
3	Peer anchors through shared hubs	12-36 mo

Target: 30%+ of new ARR from hub-up vs cold anchor outbound by month 18.

Occidental Petroleum: anchor to peer ecosystem

WAVE 1 — DOWN

Into Oxy

- **Wedge:** production optimization, decline drivers, lift timing
- **Tenant:** isolated AWS on Oxy SCADA + production data
- **Success:** deferred workovers, reallocated lift, fewer false alarms
- **Proof:** Volve 52/52 + live asset pilot scope

WAVE 2 — ACROSS

The stack

- Drilling and completions contractors (Permian fleet)
- Field services, lift OEMs, SCADA + historian integrators
- **Score hubs:** 3+ majors served, same decision class
- **Target:** 10+ hub node types, 3 prioritized hub partners

WAVE 3 — UP

Peer anchors

- Exxon, Chevron, BP, ConocoPhillips-class peers
- **Entry:** via shared hub, different tenant
- **Transfers:** equation structure + playbook
- **Does not transfer:** raw Oxy production data, ever

\$151B addressable today, \$346B by 2031

Decision intelligence is consolidating into one category. Every vertical needs an auditable, specialist layer. We are the only platform validated across thirteen of them from one codebase.

Enterprise-first, hub-led expansion

NOW

Anchor pilots

Isolated DDX deployment on flagship operator data. Real decisions, scoped wedge, measurable outcomes.

\$150K - \$1M

per engagement, 6-12 mo

WAVE 2

Hub co-sell

Decision templates through integrators serving many operators in the same industry.

\$250K - \$2M

hub ARR + pull-through

SCALE

Specialist platform

Manifest, Einstein, and future verticals on shared Elijah control plane. Net dollar retention engine.

130%+ NDR

target on landed accounts

Unit economics targets

• 75%+ gross margin on software delivery

• Low CAC via published results and hub introductions

• LTV \$500K+ enterprise, YOYO peer expansion

• Payback < 6 months per anchor client

12-month revenue mix goal

• 3 anchor pilots converted to production contracts

• 10 hub partners in active co-sell motion

• Second logo in energy graph without zero-proof outbound

• Manifest moves to first GA contracts

Everyone gives predictions. We give governing relationships.

CAPABILITY	DIGINETICS	PALANTIR	TEMPUS AI	C3.AI	MS PRESIDIO	GENERALIST LLM

Novel driver discovery (no hypothesis)	✓	✗	~	✗	✗	✗
PII + forensics 20-40x faster, less memory	✓	✗	✗	✗	✗	✗
13 industries from one codebase	✓	✗	✗	✗	✗	~
Regime shift detection	✓	~	✗	~	✗	✗
Hub-led distribution moat (YOYO)	✓	✗	✗	✗	✗	✗

Moat

18 to 36 month replication for statistical or language-first incumbents. Each deployment compounds hub connectors and decision templates. Provisional patent filed on DDX discovery framework.

What we find that no one else does

20-40x speed advantage over Presidio on PII forensics. Glucose as the dominant readmission driver. Vape traffic driving cigarette sales. Judge HR from plate discipline. GOR from raw Volve sensors.

Built the engine. Running the anchors.

Two co-founders, six years together, complementary lanes. One designed and validated the platform across thirteen industries. The other runs commercial strategy and anchor motion.

Michael Lazzarotti

CEO & Co-Founder

Designed and built DDX from scratch. Validated across thirteen industries, every result out-of-sample. Owns product, technical vision, and enterprise anchor motion. Every published number on this deck.

Evan O'Connell

CFO, COO & Co-Founder

Business operations, financial strategy, go-to-market. Owns commercial partnerships across flagship verticals. Degree in business management and entrepreneurship.

Mentorship and advisors

Ex-McKinsey + ex-MicroStrategy

Operator mentorship across enterprise GTM

Top cybersecurity IP counsel

Patent + enterprise security strategy

CCBM / Dr. Kumar (UA)

Manuscript-level validation partnership

Peachscore Accelerator

Active cohort, GTM + capital network

Pre-seed open

Capital converts four anchor motions into production revenue and lights up Wave 2 hub mapping behind each one. Distribution compounds, not customer-by-customer.

Pre-Seed

ROUND OPEN NOW

4

ANCHOR MOTIONS ACTIVE

YOYO

HUB-LED GTM ENGINE

Use of funds

- Convert Oxy, Epiq, First Watch, Capstone pilots to production contracts
- Hub mapping + co-sell motion (YOYO Wave 2 across all four)
- Manifest + Einstein production scale-up on Elijah infrastructure
- Patent expansion + enterprise security packaging
- Two senior hires: enterprise solutions + GTM lead

12-month milestones

- 3 anchor pilots converted to production contracts
- 10 hub partners with signed co-sell or integration
- 30%+ of new ARR from hub-up expansion
- Einstein + Manifest first GA contracts shipped
- Series A position: ARR + named anchors + hub graph

One engine. Four anchor ecosystems. Default decision layer for B2B ops.

VERTICAL	ANCHOR	SPECIALIST	HUB EXAMPLES	PEER EXPANSION
Energy	Occidental Petroleum	Elijah (energy module)	Field services, SCADA SI, cloud	Exxon, Chevron, BP, Conoco
Legal forensics	Epiq Global	Einstein	Relativity partners, eDiscovery vendors	Corporate legal, Am Law 100
Cybersecurity	First Watch Technologies	Einstein	MSSPs, SOC integrators, MDR	Enterprise security teams
Real Estate	Capstone + Manifest brokerages	Manifest	MLS, CRM, mortgage lenders	Brokerages, REITs, multifamily

Objective: become the default **auditable decision intelligence layer** for B2B and enterprise operations. Specialist AI on DDX. YOYO for distribution. Compounding hub graph that turns every anchor into peer expansion next quarter.

THANK YOU

Land on the operator everyone knows. Map the vendors everyone shares.

Prove auditable decisions. Expand back up through shared nodes. That is Diginetics.
