

INVESTOR PITCH DECK | MAY 2026

DIGINETICS

Specialist AI for B2B and enterprise operations.

One discovery engine. Thirteen industries validated. Auditable equations on client data. Hub-led distribution that compounds with every anchor.

13

ANCHOR MOTIONS LIVE

Pre-Seed

ROUND OPEN

Enterprise ops runs on data. Generalist AI runs on guesses.

95% of enterprise AI pilots fail to deliver ROI. Teams forensically check every output because models cannot explain themselves. Generalist LLMs optimize for fluent answers, not defensible operational decisions.

Black-box ML

XGBoost, deep nets, and ensemble scores produce predictions with no mechanism operators can audit in a board meeting, CMS review, or regulator filing.

Correlation breaks

Statistical patterns evaporate under regime change. Models trained pre-COVID, pre-rate-hike, or pre-supply-shock fail exactly when the business needs them most.

Generalist chat layers

Confident answers when facts are missing. Hallucinated citations. Wrong default for legal discovery, oilfield production, or hospital readmissions.

- The gap: no commercial system **discovers** governing relationships, **returns** auditable logic, and **works across industries** from one engine. That is the category we built.

Specialist AI vs Generalist AI

Generalists wrap a chat layer around the internet. Specialists run on validated client data inside an isolated environment and return logic engineers, clinicians, or counsel can challenge line by line.

Generalist AI

OpenAI, Anthropic, Gemini, generic copilots

- Predicts plausible language from public internet
- Same chat wrapper for every industry
- Sounds confident when it does not know
- Outputs hard to audit under pressure
- Optimizes for fluency, not operational truth
- Brittle when conditions change

Diginetics Specialist AI

DDX engine, one operation per deployment

- Answers only from validated client data
- Scoped to one operation, one industry

Novel data

Hidden drivers in data clients already own but were not querying. Cross-category dependencies analysts miss.

- Detects regime shift before incumbents do

Auditable results

Logic engineers, clinicians, and counsel can open and challenge. Defensible in board rooms and reviews.

Universal law discovery

Repeatable governing relationships, not fragile correlations. Same engine across 13 verticals.

DDX: the Deterministic Discovery Engine

Point DDX at operational data. It discovers governing relationships, stress-tests them out of sample, and returns readable equations. Same engine, different table. No human tuning required on the first pass.

Aggregate test footprint

2,050+
Validated relationships

38,000+
Feedback effects mapped

220,000+
Observations processed

13
Industries, one codebase

Provisional patent filed on the discovery framework. Strongest numbers were first-pass results, before tuning.

Why enterprise buyers care

- **Accuracy is documented**, not aspirational
- **Output is explainable** without a post-hoc layer
- Engine generalizes: **new vertical = config**, not rebuild
- Runs inside **isolated client tenant**, no data leaves
- Catches **regime shift early**, not after the loss

What DDX actually found (real runs, first pass)

Every example below is a relationship the client did not see, surfaced from data they already owned, validated out of sample, and explainable to the team responsible for the decision.

COMMERCIAL REAL ESTATE

31 metros, 12 years, 32 metrics at 99%+

Out-of-sample accuracy held through COVID, rate hikes, and normalization. One equation explained housing supply across the country.

```
months_of_supply ≈ f(30yr_mortgage_rate)
R² = 0.999 across 31 metros, 12 years
```

HEALTHCARE

101K encounters, 130 hospitals

Readmission rate within 0.02 percentage points of actual. Published models miss by 2 to 5 points.

```
Surfaced elevated glucose as dominant readmission driver, with no clinical hypothesis provided
```

BASEBALL

60 MLB players, out-of-sample

Parity with ZiPS and Steamer on home run rates. Exact counting-stat matches on multiple hitters.

```
Aaron Judge HR: 54 projected vs 53 actual
Suarez S0: 165 projected vs 165 actual (exact)
```

RETAIL

Daily POS, 88 metrics, NPS chain

Thirteen industries. One codebase. Zero domain rebuilds.

97%

BASEBALL, 60 PLAYERS

0.02pp

READMISSION GAP

RETAIL PASS RATE

INDUSTRY	HEADLINE RESULT	WHY IT MATTERS	STATUS
Energy / Oil & Gas	52/52 Volve pass, known physics recovered	Same engine targets Occidental production ops	✓
Healthcare	0.02pp readmission, glucose driver discovered	Hospital systems, CMS-defensible output	✓
Commercial Real Estate	32 metrics at 99%+ across 31 US metros	Capstone live; Manifest actively deploying	✓
Retail	481/486 relationships pass; cross-category drivers	NRS chain dataset, POS-level predictive logic	✓
Legal / Discovery	Matter-cost driver discovery on discovery data	Epiq Global pilot motion in progress	~
Public Safety	Operational regime + 911/EMS response drivers	First Watch Technologies pilot motion	~
Transportation	70/70 ATI + PeMS corridor validation	Reproducible across state and freeway scale	✓
Water / Security	76/76 country-level, 98.84% avg accuracy	Explainable early-warning, not opaque scores	✓
Sports (baseline)	97% MLB, exact counting-stat matches	Parity with ZiPS and Steamer, first commercial proof	✓

Validation plus four live enterprise anchor motions

Each anchor is the operator everyone in its industry knows. Land deep, prove auditable decisions, then yo-yo back up through the vendors that serve every peer.

ENERGY ANCHOR

Occidental Petroleum

Executive meeting in progress on production and oilfield intelligence. Same engine as Capstone and Volve, production table instead of housing table.

LEGAL SUPER-HUB

Epiq Global

Pilot motion on legal discovery and matter data. Matter cost, duration, and evidence triage drivers at enterprise scale.

PUBLIC SAFETY

First Watch Technologies

Pilot motion on 911, fire, and EMS operational streams. Causal drivers their dashboards do not surface.

COMMERCIAL RE

Capstone Communities

Live portfolio work. ~~Equity~~ **Manifest (real estate specialist)** operating exposure across assets. Leadership-readable, not another dashboard.

SPECIALIST
PRODUCT

Actively deploying with brokerages for buyer targeting, pricing defense, and agent coaching on the brokerage's own market data. Not GA yet. Elijah core powers Manifest and every future specialist.

The YOYO Plan: Down, Across, Up

Go deep on one flagship anchor, map the hub vendors that serve everyone in that industry, then yo-yo back up through shared vendors. Every anchor compounds distribution for the next one.

Why horizontal SaaS fails here

- Cold outbound to 500 logos burns cash before anyone trusts the output
- Land-and-expand inside one logo caps TAM at one operator
- Black-box AI cannot transfer through hub partners because there is nothing readable to transfer

Why YOYO wins

- One proof event opens the entire industry graph
- We transfer decision templates and equation structure, not client data
- Hub co-sell beats starting every sale from zero

Three waves (overlap by design)

WAVE	FOCUS	TIMING
1	Land anchor, wedge use case, expand inside the logo	0-12 mo
2	Map stack, land hub nodes, co-sell with anchor proof	6-24 mo
3	Peer anchors through shared hubs, decision templates	12-36 mo

Occidental Petroleum: anchor to peer ecosystem

WAVE 1 — DOWN

Into Oxy

- **Wedge:** production optimization, decline drivers, lift timing
- **Tenant:** isolated AWS on Oxy SCADA and production data
- **Success:** deferred workovers, reallocated lift, fewer false alarms
- **Proof:** Volve 52/52 public validation, live asset pilot scope

WAVE 2 — ACROSS

The stack

- Drilling and completions contractors (Permian fleet)
- Field services, lift OEMs, SCADA and historian integrators
- **Score hubs:** 3+ majors served, same decision type, warm intro path
- **Target:** 10+ hub node types, 3 prioritized hub partners

The YOYO string (illustrative)

One sentence: Land on the operator everyone knows, map the vendors everyone shares, prove auditable decisions on anchor data, then expand back up through those shared nodes.

- **Does not transfer:** raw Oxy production data, ever

\$151B addressable today, \$346B by 2031

Decision intelligence is consolidating into one category, and every vertical needs an auditable, specialist layer. We are the only platform validated across thirteen of them from one codebase.

VERTICAL	TAM 2026	CAGR	TAM 2031	STATUS
Healthcare & Life Sciences	\$44.0B	21%	\$114.1B	Validated + pilot paths
Cybersecurity / Public Safety	\$24.3B	14%	\$46.8B	First Watch pilot motion
Financial Services	\$16.5B	12%	\$29.1B	Pipeline
Insurance	\$14.2B	15%	\$28.6B	Year 2 deployment
Legal / Discovery	\$12.0B	14%	\$23.1B	Epiq Global pilot motion
Commercial Real Estate	\$12.0B	14%	\$23.1B	Capstone live + Manifest deploying
Supply Chain	\$10.7B	17%	\$23.5B	Configured
Energy & Utilities	\$8.5B	16%	\$17.9B	Oxy executive meeting + Volve proof
Sports & Entertainment	\$9.5B	28%	\$32.6B	97% MLB validated baseline

Sources: Mordor Intelligence, Grand View Research, MarketsandMarkets, Statista (2025-2026). CAGR per analyst consensus.

Enterprise-first, hub-led expansion

NOW

Anchor pilots

Isolated DDX deployment on flagship operator data. Real decisions, scoped wedge, measurable outcomes.

\$150K - \$1M

per engagement, 6-12 mo

WAVE 2

Hub co-sell

Decision templates through integrators and service providers serving many operators in the same industry.

\$250K - \$2M

hub ARR + pull-through

SCALE

Specialist platform

Manifest plus vertical modules on shared Elijah control plane. Net dollar retention engine.

130%+ NDR

target on landed accounts

Unit economics targets

- 75%+ gross margin on software delivery
- Low CAC via published results and hub introductions
- LTV \$500K+ enterprise, expansion via YOYO peer motion
- Payback < 6 months per anchor client

12-month revenue mix goal

- 3 anchor pilots converted to production contracts
- 10 hub partners in active co-sell motion
- Second logo in energy graph without zero-proof outbound
- Manifest moves from actively deploying to first GA contracts

Everyone else gives predictions. We give governing relationships.

CAPABILITY	DIGINETICS	PALANTIR	TEMPUS AI	C3.AI	GENERALIST LLM
Auditable equations on client data	✓	✗	✗	~	✗
Novel driver discovery (no hypothesis given)	✓	✗	~	✗	✗
13 industries from one codebase	✓	✗	✗	✗	~
Regime shift detection	✓	~	✗	~	✗
Deploy new vertical in days, not months	✓	✗	✗	✗	✗
Hub-led distribution moat (YOYO)	✓	✗	✗	✗	✗

Moat

18 to 36 month replication for statistical or language-first incumbents. Each deployment compounds hub connectors and decision templates. Provisional patent filed.

What we find that no one else does

Judge home runs from plate discipline. Vape traffic driving cigarette sales. Glucose as the dominant readmission driver. GOR recovered from raw Volve sensors. Portfolio equations at Capstone.

Built the engine. Running the anchors.

Two co-founders, six years together, complementary lanes. One designed and validated the platform across thirteen industries. The other runs commercial strategy and anchor motion.

Michael Lazzarotti

CEO & Co-Founder

Designed and built DDX from scratch. Validated across thirteen industries, every result out-of-sample. Owns product, technical vision, and enterprise anchor motion. Every published number on this deck.

Evan O'Connell

CFO, COO & Co-Founder

Business operations, financial strategy, and go-to-market. Owns commercial partnerships across flagship verticals. Degree in business management and entrepreneurship.

Mentorship and advisors

Ex-McKinsey + ex-MicroStrategy

Operator mentorship across enterprise GTM

Top cybersecurity IP counsel

Patent + enterprise security strategy

CCBM / Dr. Kumar

Manuscript-level validation partnership

Peachscore Accelerator

Active cohort, GTM and capital network

Pre-seed open

Capital converts four anchor motions into production revenue and lights up Wave 2 hub mapping behind every one of them. Distribution compounds, not customer-by-customer.

ANCHOR MOTIONS ACTIVE

YOYO

HUB-LED GTM ENGINE

Use of funds

- Convert Oxy, Epiq, First Watch, Capstone pilots into production contracts
- Hub mapping and co-sell motion (YOYO Wave 2 across all four)
- Manifest deployment scale-up and Elijah production infrastructure
- Patent expansion and enterprise security packaging
- Two senior hires: enterprise solutions + GTM lead

12-month milestones

- 3 anchor pilots converted to production contracts
- 10 hub partners with signed co-sell or integration
- 30%+ of new ARR from hub-up expansion
- Manifest from actively deploying to production revenue
- Series A position: ARR + named anchors + hub graph

One engine. Four anchor ecosystems. Default decision layer for B2B ops.

VERTICAL	ANCHOR	HUB EXAMPLES	PEER EXPANSION
Energy	Occidental Petroleum	Field services, SCADA SI, cloud hyperscalers	Exxon, Chevron, BP, ConocoPhillips
Legal	Epiq Global	Relativity partners, eDiscovery forensics	Corporate legal, Am Law 100
Public Safety	First Watch Technologies	CAD integrators, MSSPs, city IT	Cities, states, federal agencies
Real Estate	Capstone Communities + Manifest	MLS, CRM, mortgage lenders	Brokerages, REITs, multifamily operators

Objective: become the default **auditable decision intelligence layer** for B2B and enterprise operations. Specialist AI on DDX. YOYO for distribution. Compounding hub graph that turns every anchor into peer expansion the next quarter.

THANK YOU

Land on the operator everyone knows. Map the vendors everyone shares.

Prove auditable decisions. Expand back up through shared nodes. That is Diginetics.
